SLL-2 · SPI RULE BOOK

SHANTI DEVI PLAYERS INDEX

How every SLL-2 player is scored, given an overall and an age-bracket rank, and placed in A+, A or B.

Score 0–1000 **Ranks** Overall · Age bracket **Brackets** Under 35 · 35–39 · 40+ **Version** Draft · 4 Nov 2026

DECIDED
Age brackets, the cut-off date, Legend criteria and A+ / A / B / Legend categories, from the League.

PROPOSED
Formula, weights and thresholds: drafted for sign-off.

OPEN
Listed at the end.

01 WHAT THE INDEX DOES

The Shanti Devi Players Index (SPI) gives every approved player one score from 0 to 1000, built from their batting, bowling and fielding records. Each player then gets two ranks: an **overall rank** across the whole pool and an **age-bracket rank** against players of their own age bracket. Categories follow from the bracket rank. DECIDED

02 DATA SOURCES

SOURCE	WHAT IS TAKEN	USE
CricHeroes career profile (the player's own link)	Matches, runs, batting average, strike rate, 4s and 6s, 50s, wickets, economy, bowling average, catches, stumpings	Main input PROPOSED
SLL-1 scorecards and the Ball Library	The same figures for Season 1 matches	Added to the career figures; weight still to be decided OPEN
Registration form	Date of birth, declared role, wicket-keeper	Age bracket, role tie-break, keeper flag DECIDED

Figures are read on the **freeze date** (proposed: the day registration closes, 29 Nov 2026). Matches added after that do not count. PROPOSED The League reads CricHeroes figures from each player's own link; it does not scrape the site.

---

03 SMALL SAMPLES

A record is a **small sample** when it is below **30% of the pool median**: fewer than 30% of the median player's matches for batting, or 30% of the median player's wickets for bowling. A small-sample skill gets a **standard low score of 10** out of 100 instead of its percentile. PROPOSED

The cut-off uses the median, not the average, because a few very long careers pull the average up. It moves with each season's pool, so it never needs a fixed number. On the league's 1,000-player database (4 Nov 2026):

CUT-OFF RULE	BATTING CUT-OFF	PLAYERS BELOW	BOWLING CUT-OFF	PLAYERS BELOW
30% below the pool average	270 matches	357 (36%)	177 wickets	482 (48%)
50% of the pool median	168 matches	167 (17%)	94 wickets	302 (30%)
30% of the pool median	**101 matches**	**89 (9%)**	**56 wickets**	**205 (21%)**
10% of the pool median	34 matches	16 (2%)	19 wickets	91 (9%)

30% of the median catches the thin records (about 1 player in 11 for batting) without marking down players with long careers. Bowling flags more players because many batters rarely bowl; for them the low Bowl score changes nothing, as the SPI counts their stronger skill most.

Players with no record are **Unrated**: they go into category B, and the panel may move them after a trial or other evidence. PROPOSED

---

04 BATTING, BOWLING AND FIELDING SCORES

Each figure becomes a **percentile** within the whole pool (0 = lowest, 100 = highest), so runs, rates and averages can be added fairly. For economy and bowling average, lower is better, so the order is reversed. PROPOSED

SCORE	BUILT FROM	WEIGHTS
Batting **Bat**	Batting average · strike rate · boundary %	40% · 30% · 30%
Bowling **Bowl**	Wickets per match · economy (lower better) · bowling average (lower better)	40% · 30% · 30%
Fielding **Fld**	Catches per match, plus stumpings for keepers	100%

Boundary % is the share of balls faced that the player hit for four or six: (4s + 6s) ÷ balls faced × 100. Balls faced come from runs ÷ strike rate × 100. PROPOSED

---

05 ROLE: BATTER, BOWLER OR ALL-ROUNDER

Role comes from the two main scores, so players who are strong at both (the overlap) are recognised as all-rounders. PROPOSED

ROLE	RULE
All-rounder	Bat ≥ 60 **and** Bowl ≥ 60: in the top 40% of the pool for both
Batter	Not an all-rounder, and Bat ≥ Bowl
Bowler	Not an all-rounder, and Bowl > Bat
Wicket-keeper	A flag added to the role when the player keeps (registration and records)

When the two scores are within 2 points, the role the player declared on registration decides.

---

06 THE SPI SCORE

One formula covers every role. The stronger skill counts most, the second skill adds to it, and fielding adds a little. That way a genuine all-rounder ranks well without beating a clearly better specialist. PROPOSED

```
SPI = 10 × ( 0.70 × max(Bat, Bowl)
           + 0.20 × min(Bat, Bowl)
           + 0.10 × Fld )
```

The score runs from 0 to 1000. Ties are split by career matches (more first), then by registration date (earlier first).

07 TWO RANKS

RANK	AMONG	SHOWN AS
Overall rank	Every approved player in the pool	#12 of 260
Age-bracket rank	Players in the same bracket: under 35, 35–39 or 40+	#4 of 120 · 40+
Role lists (in each bracket)	Top batters by Bat, top bowlers by Bowl, all-rounders by SPI	Bat #2 · 40+

Brackets go by completed age on Sunday 7 March 2027, the day of the last league match.
DECIDED

08 CATEGORIES

Under 35

Every player under 35 is A+, whatever their score. They still get an overall rank and a bracket rank. DECIDED

35–39

The top **N** by bracket rank are A; the rest are B. DECIDED

40+

Same as 35–39, ranked only against other 40+ players.
DECIDED

HOW MANY MAKE A

"Enough" means enough A players for 14 teams to hold up to 6 each, with some choice left. The A places are shared between the 35–39 and 40+ brackets in proportion to how many players each bracket has. PROPOSED

```
A places = 14 teams × 6 A per squad × 1.25 = 105

bracket A = 105 × (players in bracket ÷ players in both)
            never more than half the bracket
```

LEGENDS

A player is placed in the Legend category, instead of A or B, if they are 60 or older on the cut-off date, **or** their career batting average is below 10 **and** their career strike rate is

below 100. This test uses the raw career figures, before any adjustment. The Board may also name any player a Legend, or make an exception, on a reasonable basis that it records. Legends keep both SPI ranks and are left out of the A count above. DECIDED

BALANCE BY ROLE

The A seats in each bracket are shared out in proportion to that bracket's mix of batters, bowlers and all-rounders. Each share is filled from the top of its role list, and any seats left over go to the next-best SPI. This keeps A from filling up with batters alone.
PROPOSED

---

09 WORKED EXAMPLE

Three made-up 40+ players, to show the arithmetic. None of them is a small sample.

PLAYER	BAT	BOWL	FLD	ROLE	SPI
Player X	92	18	55	Batter	10 × (64.4 + 3.6 + 5.5) = **735**
Player Y	71	74	60	All-rounder	10 × (51.8 + 14.2 + 6.0) = **720**
Player Z	22	88	40	Bowler	10 × (61.6 + 4.4 + 4.0) = **700**

X ranks first overall among the three. Y is listed among the 40+ all-rounders and Z tops the 40+ bowlers list. If the 40+ A cut-off falls at 690, all three are **A**.

---

10 GOVERNANCE

G1 A grading panel of at least three people runs the index and signs off the categories.
PROPOSED

G2 The panel may move a player by one category, with written reasons, when the record clearly misleads, for example after a long injury or with a thin, very old record.
PROPOSED

G3 A player may ask once for a review before the pool is published. The panel's decision after review is final. PROPOSED

G4 Scores, ranks and categories are frozen when the auction pool is published.
PROPOSED

G5 The weights and thresholds in this document are reviewed after each season.
PROPOSED

STILL TO DECIDE

- [ ] Freeze date for figures (proposed: 29 Nov 2026)
- [ ] How much SLL-1 performance should count beyond career figures

---
